

ISO/IEC 27001 certified

Bring us in when a bank's AI is stuck at pilot.

CoderPush turns bank AI pilots into production workloads on AWS, in Vietnamese, with the data kept in Vietnam or on-prem.

Quick desktop went GA on 9 Sep and the Hanoi Local Zone opened in June. We make both safe for banks.

Share an opportunity →

● Live at TPS since April 2026 ● Presight PoC on-prem at MB Bank ● Handed over at TPBank

AI is everywhere in Vietnamese finance. Production is not.

41%

of Vietnamese financial services firms actively deploy AI

61%

of Vietnamese businesses using AI are still in testing

8%

of Vietnamese businesses run AI agents in core processes

The hard part is no longer the model. It is Vietnamese data, governance and the path to go-live.

Unlocking Vietnam's AI Potential 2026, AWS and Strand Partners.

The rules have arrived. Build to them from day one.

- **The AI Law applies now.**

Every system we ship carries its evidence: risk class, logs, human override and a kill switch.

A summary for orientation, not legal advice.

Buy the front end. Build the brain. Keep the data.

Your people work in Amazon Quick or your own apps. We build the intelligence in the middle: Vietnamese speech, documents and agents. Your data stays where it lives today.

Where must your data live?

☐ AWS Region

☒ Hanoi Local Zone

☐ On-prem

Compute and storage inside Vietnam, managed through the same AWS APIs.

- ✓ The bank wants Quick but worries about where its data goes.
- ✓ AI Law or SBV deadlines are forcing an inventory of AI systems.
- ✓ IT wants AI-native engineering with Kiro, as TPBank did.

Systems in production, measured.

● Live

T'FOX, AI investing assistant

📖 TPS

Live since 10 Apr 2026 · 174 days in production

72% of questions in scope; 48% of users return and drive 81% of traffic; every question traced across 31 intent classes.

Reference available

● PoC completed

Presight, governed AI analytics on-prem

📖 MB Bank

PoC completed successfully; v2 in build

Natural-language answers on governed metrics, inside the bank's data centre, with no data leaving the building. Built by our Head of AI Applications, delivered exclusively by CoderPush in Vietnam.

Reference available

● Delivered

Agent-driven development, handed over

📖 TPBank

The bank's own team now runs the method without us.

● Live

Customer Data Platform on AWS

📖 TPS

Under 5 minutes from event to CRM; every active client resolved to one profile.

● Delivered

Deepfake detection on the phone

📖 Ensign, Singapore

MVP in 8 weeks; under 500 ms per check on a mid-range phone.

● Live

AI ordering assistant

📖 BuyMed

35,000+ pharmacies and clinics; 40% faster order processing.

Evidence before go-live. Measurement after.

📄

01

Spec first.

The specification is the contract, written for people and for models.

🧪

02

Evaluate before launch.

A test set built from your real data; nothing ships without passing it.

👤

03

Humans hold the go/no-go.

Our engineers own architecture, review and release; nothing merges unattended.

🛡️

04

Evidence by default.

Risk class, logs, human override and a kill switch, ready for your risk team and the regulator.

Every month you get a report like the one we send TPS: every question traced and classified, what worked, what did not, and what we fix next.

What we are not

Not a large-scale server migration factory, and not a licence reseller that disappears after the sale.

What the account gains

T'FOX was TPS's first workload on AWS. Every new use case we ship on AWS is shared in ACE, and we handle the funding paperwork.

The people you will work with.

Harley Trung

Co-founder & Chief AI Officer

Sets how we build, evaluate and govern every AI system we ship. Yale Computer Science; Microsoft; founder of startups in the US and China.

Ben Pham

Head of AI Applications

Turns bank data into answers business users can trust. Founder of presight.io; former Chief Data Officer, Siêu Việt Group; former Data Scientist, Microsoft.

Dr. Andy Tran

Head of AI Research

Leads our work on Vietnamese language and document AI. PhD, Kanazawa University; built Doctranslate.io; former CTO at Logivan and Waves8; lecturer, VNU International School.

- Thien Tran, Tech Lead, T'FOX
- Thien Kieu, Technical Manager, bank AI programmes
- Cang Ta, AWS Practice Manager

How to engage

- Share the opportunity in ACE, or email us with the bank and the use case.
- Your contact: Cang Ta, AWS Practice Manager.

Five first-call questions

1. Which AI use case has a sponsor and a KPI but no path to production?
2. Where must the data live: an AWS Region, Vietnam only, or on-prem?
3. Is Vietnamese speech or document handling involved?
4. Who signs off AI risk today, and have they mapped the AI Law deadlines?
5. Is there budget this quarter, or should we apply for AWS funding first?

Where does our data live?

Where you decide: an AWS Region, the Hanoi Local Zone or your own data centre. Personal data is de-identified before anything leaves your perimeter.

Who owns the code and the accounts?

You do. We build in your AWS accounts under your IAM, and you can revoke our access at any time.

How do you contract?

As a consulting services engagement: a scoped project, or a fee linked to an agreed outcome.

Can AWS help fund it?

For eligible projects, we apply for AWS funding on your behalf and handle the paperwork.

How fast can we go live?

A new use case goes live for a named user group within one quarter. Where our product already exists it is faster: an investment assistant like T'FOX goes live in 3-4 weeks.

How do you pass our security review?

We are ISO/IEC 27001 certified. We work inside your accounts or data centre, under your access policies, with every action logged, and our due-diligence pack includes the certificate and its scope.

Do you only work on AWS?

No. AWS is our home, but our Presight proof of concept ran fully on-prem at MB Bank, and the same pattern runs wherever your data must live.
